

tracesbc without Root Access

Run the following command as root SBC Cli:

```
sed -r -i 's/(^Cmd_Alias  
IPCS_COMMANDS.*[^\t][^\r][^\a][^\c][^\e][^\S][^\B][^\C])$/\1\, \usr\local\tracesbc  
\bin\traceSBC/g' /etc/sudoers.d/001_sbce  
echo "alias tracesbc='sudo /usr/local/tracesbc/bin/traceSBC'" >>  
/etc/profile.d/sbce-shell.sh
```

After running the two commands tracesbc is running without root password.
