

tracesbc without Root Access

Run the following command as root SBC Cli:

```
sed -r -i 's/(^Cmnd_Alias  
IPCS_COMMANDS.*[^\t][^\r][^\a][^\c][^\e][^\S][^\B][^\C])$/\1\, \usr/local/tracesbc  
\bin/traceSBC/g' /etc/sudoers.d/001_sbce  
export alias tracesbc='sudo /usr/local/tracesbc/bin/traceSBC'
```

After running the two commands tracesbc is running without root password.
